Summary

ROL is a granite grey cast stone product with an acid-edged waterproof finish and an embedded base set at pavement level. Its geometry resembles a buried tyre with rounded edges to minimise its aggressive aspect, rolling in the same direction as the traffic and exemplifying its role as a vehicle-pedestrian boundary. LÍMITE ROL was designed by M. Figueras and J. L. Castaño in conjunction with Escofet.

(1) Cast stone, Grey, Beige, Acid-etched and waterproofed. / Embedded / 190 Kg.
