

The *So-ffa* system consists of four different parallelepiped volumes in reinforced cast stone. Their simple but powerful geometry is a metaphor for rock hewn in a quarry. Their weight and natural stability makes pavement anchorage unnecessary, and the design facilitates their usage in city spaces or natural settings such as beaches, parks and forests.

Origin

According to the words of the authors “The *So-ffa* system was originally designed as neutral street furniture for a place where we would have liked to install some seats in black basalt”.

Versatile

“We realised that anything can be used to sit on in urban settings: a wall, a tree-trunk or even a stone... so, seeing that we didn't have any stones with the right size, we decided to make them, obviously taking care of the angles and the way they fit together to allow any combination”.

Flexible

We were also interested in the way young people use benches; sitting on the backrests and propping their feet on the seat, or just leaning on them, for example; so we thought our group of “stones” would facilitate all those positions and any others as well.”

Material

Four volumes made from reinforced, etched, water-repellent concrete in the Escofet standard color chart.

Installation

All modules self-standing on pavement.

1. Bench

So-ffa	SO-1	SO-2	FFA-1	FFA-2
Dimensions	215 x 50 x 85 cm	95 x 50 x 74 cm	215 x 77 x 45 cm	95 x 77 x 45 cm
Weight	1622 kg	637 kg	1229 kg	572 kg

1.1 General features

Material	Reinforced concrete	Fixing	Free-standing
Finish	Etched and waterproofed
