

Kushi is an urban element made from concrete, in a square shape and with a slightly rounded edge. It was designed as a multiple seat for free use. Its linear aggregation materialises in *Kushi Line*, whereas *Kushi Dot*, of a larger size and with a hollow interior, where the tree grows, invites passers-by to approach and sit in its shade.

Concrete | Modular |  160 cm/max |  1082 kg/ud |  8

Add-ons: LED

 Update 27.07.2020

Origin

Kushi or “for free use” in Japanese, brings to mind a pillow with rounded lines and a soft appearance. This concrete cushion is the result of a project for the city of Rostock, on the shores of the Baltic Sea.

Combinable

The *Kushi Line* model permits seats to be combined in large rows with a central model and a second special model that is added at the ends. *Kushi Dot* is a larger seat formed by two equal pieces that are coupled around a tree.

Material

Non-reinforced dry-mix concrete with an etched finish, in the *Escofet* standard chart colours. *Kushi Dot* offers the option of installing a LED light kit recessed in the baseboard.

Installation

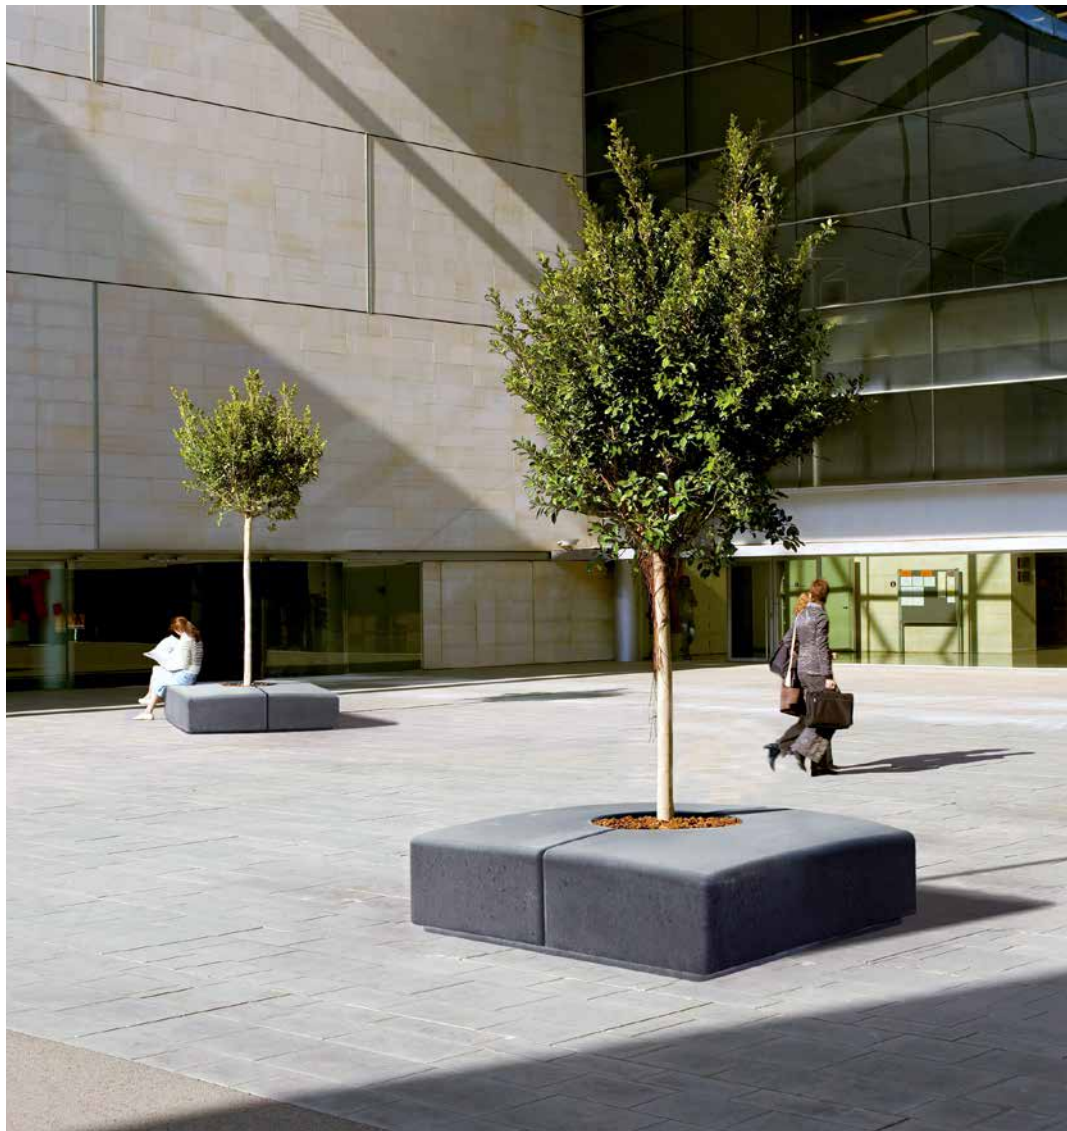

Both models are self-standing, with a sunken baseboard that enables the use of slings.
