

DIGITAL

DIGITAL is an urban furniture solution designed to incorporate words, numbers and symbols into public space, transforming each intervention into an element of communication and collective identity. Based on a modular concrete system, it enables flexible compositions that function as wayfinding, communication and placemaking elements, integrating naturally into urban, landscape and architectural projects.

ORIGIN

Public space is not only experienced, it is also interpreted. DIGITAL stems from the ambition to integrate language into architecture and urban furniture, allowing words, numbers and symbols to become part of the spatial experience while contributing to identity, orientation and meaning.

DESIGN

DIGITAL is based on the universal geometry of the 7-segment module, reinterpreted as an urban furniture element. The combination of its components makes it possible to create numbers, letters and symbols that can be adapted to different spatial contexts and uses. Its modular character encourages the creation of urban landmarks, wayfinding systems and site-specific interventions, naturally integrated into urban and landscape projects.

MATERIAL

Molded concrete with sandblasted finish, with the option of recycled aggregate. In grey-coloured models, Eco-Grey® technology enables the integration of aggregates obtained from recycled concrete while maintaining the material's characteristic performance and appearance.

INSTALLATION

Installation is carried out using conventional lifting and handling systems. All modules are fixed to the pavement by means of two threaded bolts anchored to embedded sleeves integrated into the base of each element, ensuring stability and accurate positioning.
